

Homework 6 (5 points)

- A) Write a php program that creates a form with checking and required fields. Your form should have input fields, radio buttons and switch statements. You may want to think of your final project while you design this homework . Your final project will have a form and a database. As you think of what to do for your final project, you may want to design this form with the final project in mind. Please make sure this runs on your server as well as the Northeastern server. In your blog please hand in both the northeastern link to this program as well as the code that runs on your server.
- B) Please give me a one-page of what you think you will do for your final project.

*Please maintain the site structure with www being at the root and directories js, images and css underneath. Your index.html can go under the www folder. Compress this into a ZIP file called **YourLastName_Homework6.zip** and upload to your blog 6AM this coming Monday.*
