

Homework 3 (5 points)

Continue to work on your resume/website. Make sure that at this point you have 3 pages. This should be a single page application, only one html and please call it index.html! You may use either just CSS or the jQuery version to create the navigation. Please create a hierarchy or an architecture that will require navigation. Add navigation of your choice. Also, on one of the pages add sliding panels. On a different page add tabs.

Go back to your well-styled table and add tooltips where appropriate. If you choose to list your favorite books, you can add a column with an image of the book cover with a tooltip that gives information about the book.

*Please maintain the site structure with www being at the root and directories js, images and css underneath. Your index.html can go under the www folder. Compress this into a ZIP file called **YourLastName_Homework3.zip** and upload to your blog 6AM of the next class day.*
