Homework 4 (5 points)

Download and set up your amp stack and write your first hello world program.

Now go back to homework 3, add a <mark>form</mark> and <mark>tabs</mark> to your website. Next take the html, JavaScript and CSS file that you created and run it on on your webserver. Remember to move the files to the client side of your server!

Also try running it on the northeastern digitalmedia server.

So here's what you need to hand in:

   a. A zip file for adding a form and tabs to homework 3.
   b. A link on your webserver that runs your hello world program. On my server the link looks like this: http://localhost/6451Apps/Hmwk4-StudentHmwk/helloWorld.html
   c. A link on your webserver running homework 3. On my server the link looks like this: http://localhost/6451Apps/Hmwk4-StudentHmwk/www/

Please maintain the site structure with www being at the root and directories js, images and css underneath. Your index.html can go under the www folder. Compress this into a ZIP file called **YourLastName_Homework4.zip** *and upload to your blog 6AM of the next class day.*
